PROFESSIONAL SUMMARY

Full-Stack Senior Software Engineer with 5+ years of experience designing and scaling enterprise applications using React, Angular, Node.js and Azure. Skilled in Microservices, cloud deployment and test-driven development, with Achievements Including boosting productivity by 80% and reducing file turnaround by 100%.

CORE TECHNICAL SKILLS

Frontend: Angular, React, Typescript, React Native JavaScript, HTML, CSS Bootstrap, Material UI Redux, Ngrx Figma, Adobe XD Jest, Mocha, Enzyme Data Structures and Algorithms GraphQL.

Backend: Node js, Nest js, Express js, RabbitMQ, C#, Asp.Net, Git.

Database: Redis, PostgreSQL, MongoDB, SQL , MySQL.

Monitoring & Observability: Grafana, Prometheus.

Methodologies: Agile, Test-Driven Development.

Cloud & Devops: Azure, Docker.

EMPLOYMENT HISTORY

Seamfix - Engineering Manager (January 2026- Present)

- ❖ Engineering Leadership: Directed a cross-functional team of 4 engineers, cultivating a high-performance culture rooted in technical ownership and continuous professional development.
- ❖ Strategic Delivery: Managed the end-to-end lifecycle of mission-critical services, consistently meeting aggressive delivery milestones while upholding rigorous architectural standards.
- ❖ Cross-Functional Synergy: Collaborated with Product, Design, and QA stakeholders to synthesize complex business objectives into scalable, well-scoped technical roadmaps.
- ❖ Operational Excellence: Enhanced team velocity and forecasting accuracy by architecting lean Agile workflows and optimizing sprint cadence.
- ❖ Mentorship & Growth: Championed professional advancement through structured 1:1s and personalized development plans for junior developers, contributing to a 80% increase in team productivity and higher output quality
- ❖ Technical Advisory: Served as the primary arbiter for architectural decisions, resolving complex systemic bottlenecks and ensuring long-term code health.

Seamfix - Senior Software Engineer (July 2025- December 2025)

- ❖ Implemented comprehensive unit tests using Jest across multiple NestJS microservices, significantly improving test reliability and increasing overall code coverage from 50% to 80%. Integrated testing into the Nx Monorepo CI workflow, helping to proactively catch defects before production.

- ❖ Enhanced the National Identification Number (NIN) validation service by extending backend logic in NestJS (Node.js) with dealer code verification, leveraging MongoDB and PostgreSQL for secure and accurate data storage. Integrated the upgraded service into the Angular + TypeScript frontend, applying NgRx state management, robust form validations, and responsive CSS styling to improve user experience and data integrity.
- ❖ Designed and implemented the Corporate Private Mobile Lines Registration workflow using a microservices architecture within an Nx Monorepo, enabling scalable development. Implemented asynchronous processing with RabbitMQ, optimized caching with Redis, and ensured persistent data handling with PostgreSQL, significantly streamlining corporate onboarding and improving operational efficiency

Wema Bank - Senior Software Engineer (June 2021- July 2025)

- ❖ Led the design and development of multiple enterprise-scale applications including Wema Mood (employee engagement platform) and the Digital File Archival System, supporting thousands of internal users across the bank.
- ❖ Built high-performance, scalable, and accessible interfaces using React, Angular, and TypeScript, while delivering four functional modules (Mood, Requests, Polls, and Surveys). Designed end-to-end UI/UX workflows using Figma, implemented real-time data synchronization with React Query and SWR, and enforced predictable state management with Redux and NgRx.
- ❖ Developed optimized polling algorithms for real-time analytics, implemented enterprise authentication via Active Directory, and delivered secure role-based access control systems. Improved employee productivity by 80%, achieved a 100% improvement in file processing turnaround time, and enhanced overall operational efficiency through intelligent notifications, validation workflows, and performance tuning across the frontend ecosystem.

Additional High-Impact Contributions

- ❖ Architected reusable design systems and shared UI component libraries, accelerating development across multiple internal products.
- ❖ Led frontend performance optimization initiatives, reducing page load times and improving runtime efficiency across large-scale dashboards.
- ❖ Implemented robust form validation frameworks using Formik and Yup, lowering data entry errors and improving system reliability.
- ❖ Drove API integration standards using React Query, SWR, and Axios, improving data consistency and reducing redundant requests.
- ❖ Collaborated closely with backend (Node.js, C#, ASP.NET) and DevOps teams on Azure deployments, ensuring smooth CI/CD release cycles.
- ❖ Mentored junior developers, conducted code reviews, and enforced best practices in clean architecture and testable UI design.

Softbrain llc - Frontend Software Engineer (January 2020- June 2021)

- ❖ Developed responsive and user-friendly web interfaces using HTML, CSS, and JavaScript.
- ❖ Built reusable UI components using React / Angular
- ❖ Translated Figma and design mockups into pixel-perfect web pages
- ❖ Integrated frontend applications with REST APIs and backend services
- ❖ Optimized websites for performance, accessibility, and cross-browser compatibility

EDUCATION

- ❖ University Of Ilorin, Ilorin

Agricultural And Biosystems Engineering, BEng. 2019

CERTIFICATION

- ❖ Azure Fundamentals (AZ-900), Microsoft, 2025

LANGUAGES

- ❖ English : Fluent
- ❖ German : Basic
